

*FPS Booster*TM 0.9.3.2

-Disclaimer-

You must run the provided files as administrator or it will not work as intended. I (MRxSNIPES2) am not responsible for what may happen as a result of using this script. This script was designed for Windows 7 but it can have errors and / or bugs on Windows 8, 8.1 or possibly 10.

Use this at your own risk.

-About-

This script is meant to be used on low end computers. At the current time, this version supports the Steam version of Grand Theft Auto V. Using it with Retail/Non-Steam will also work. All files must be in the same folder to work properly. **If you have your game installed in a different directory other than the default you must specify it in the .BAT file (retail_launcher).**

-How does it work?-

These simple scripts will stop unneeded services to help increase your FPS in GTA V. When the game is closed, all services will automatically be restarted.

-How to use-

1. Run START_GTAV.bat (Do not execute the other ones. Ever. START_GTAV calls for them already).
2. The batch file will end unnecessary processes and lunch GTA V.
3. Play the game!
4. Once you exit the game all processes that were previously ended will be restarted.

-How to use Commandline.txt-

1. Drag and drop the provided commandline.txt into the root directory of your Grand Theft Auto V installation.
2. You can edit the commandline.txt and tweak any features you desire. Notepad and Notepad++ are compatible.

-Change log-

- **0.9.3.2** – Added commandline.txt
- **0.9.3** – Added support for non-steam
- **0.9.2** – Added screenshots to the documentation folder of NVIDIA and ATI/AMD control panel
- add some new stuff and moved the scripts to the script_files folder
- added a new script to try to help users with low RAM
- **0.9.1** – Added a changelog, Fixed the pdf file and changed to timer from 60 to 120 to fix the slow Social Club start due to the process being set to low priority.
- **0.9** – Added the documentation folder
- **0.8** – Removed read-me.txt for PDF
- **0.7** – Added the /y to one of the services to stop
- **0.6** – Added the wait for gta5 to close before starting restore script
- **0.5** – Added stop and restore scripts to the start script
- **0.4 to 0.1** – Started working on it and adding a lot to the script

-Misc-

Feel free to look in the other bat files and see what is in there. You can find useful documentation and other goodies. The scripts are highly customizable and can be tweaked to your liking.

-Credits-

- **MRxSNIPES2** – Head design
- **theNGclan** – Fixed grammar and documentation
- **Sheepish2** – Testing (AKA Honorary Lab Rat)

**You can customize the script to search for the game's directory if you do not own a Steam version of GTA V.
